## Module Handbook

Module designation	<i>Biocompatible Material</i>
Semester(s) in which the module is taught	<i>2<sup>nd</sup> (second)</i>
Person responsible for the module	<i>Dr. Yessie Widya Sari</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>Academic Common course (ACC) in the second year (2<sup>nd</sup> semester) Master's Degree</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>

<p>Module objectives/intended learning outcomes</p>	<ol style="list-style-type: none"> <li>1. <i>Students are able to understand lecture contracts and the scope of biocompatible materials.</i></li> <li>2. <i>Students are able to detail the basic properties of materials.</i></li> <li>3. <i>Students are able to apply the concept of electronic materials as biocompatible materials.</i></li> <li>4. <i>Students are able to apply the concept of metal materials as biocompatible materials.</i></li> <li>5. <i>Students are able to apply the concept of polymer materials as biocompatible materials.</i></li> <li>6. <i>Students are able to apply the concept of ceramic materials as biocompatible materials.</i></li> <li>7. <i>Students are able to apply the concept of composite materials as biocompatible materials.</i></li> <li>8. <i>Students are able to analyze material characteristics of biocompatible materials.</i></li> <li>9. <i>Students are able to apply sterilization concepts to biocompatible materials.</i></li> <li>10. <i>Students are able to apply the concept of cell - biomaterial interactions to biocompatible materials.</i></li> <li>11. <i>Students are able to apply the drug delivery system concept.</i></li> <li>12. <i>Students are able to apply the concept of tissue engineering as a biocompatible material.</i></li> <li>13. <i>Students are able to apply the concept of biocompatible materials to various clinical applications.</i></li> <li>14. <i>Students are able to integrate basic concepts of biocompatible materials in various clinical case examples.</i></li> </ol>
<p>Content</p>	<p><i>Scope of biocompatible materials, basic properties of materials, electronic materials as biocompatible materials, metal materials as biocompatible materials, polymer materials as biocompatible materials, ceramic materials as biocompatible materials.</i></p>
<p>Examination forms</p>	<p><i>Written exam</i></p>
<p>Study and examination requirements</p>	<p><i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30%), mid semester exam (35%), and end semester exam (35%)</i></p>
<p>Reading list</p>	<ol style="list-style-type: none"> <li>1. <i>Agrawal, C.M, Ong, J.L, Appleford, M.R, Mani, G. Introduction to Biomaterials: Basic Theory with Engineering Applications , 1st Edition, Cambridge University Press. 2013</i></li> <li>2. <i>Clement, C. Brain-Computer Interface Technologies: Accelerating Neuro-Technology for Human Benefit. 1st edition, Springer International Publishing. 2019</i></li> <li>3. <i>Sari, Y.W., Asisyah, N., Saputra, A., Abdurrahman B. Pengantar Biomaterial Untuk Kesehatan. PT Penerbit IPB Press. 2021</i></li> </ol>

# Module Handbook

Module designation	<i>Bioelectromagnetism</i>
Semester(s) in which the module is taught	<i>1st (first)</i>
Person responsible for the module	<i>Dr. Agus Kartono, M.Si</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>Foundational course (FC) in the first year (1st semester) Master's Degree</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities per weeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students are able to explain the basics of electricity and magnetism as an introduction to bioelectromagnetism</i></li> <li><i>2. Students are able to explain the electrical properties in nerve cells (neuron cells).</i></li> <li><i>3. Students are able to explain the wiring equation derived from the Hodgkin-Huxley neuron model.</i></li> <li><i>4. Students are able to explain the mechanical and electrical properties of the cardiac cycle.</i></li> <li><i>5. Students are able to explain techniques for monitoring nerve cell activity using the fluorescence method.</i></li> <li><i>6. Students are able to explain optogenetic concepts and techniques.</i></li> <li><i>7. Students are able to explain the latest research on monitoring the electrical properties of nerve cells.</i></li> </ol>

Content	<i>Introduction to Bioelectromagnetism, electrical properties of Nerve Cells (Neuron Cells), wiring equations (Hodgkin - Huxley neuron model), mechanics and electricity of the cardiac cycle, basic principles and applications of fluorescence sensing, basic concepts and techniques in optogenetics, research capita on monitoring the electrical activity of nerve cells</i>
Examination forms	<i>Written exam, project based</i>
Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30%), mid semester exam (20%), and project-based (50%)</i>
Reading list	<ol style="list-style-type: none"> <li data-bbox="616 638 1401 707">1. <i>Ueno, S, Shigemitsu, T. Bioelectromagnetism: History, Foundations and Applications. 1st edition. CRC Press. 2022</i></li> <li data-bbox="616 712 1401 824">2. <i>Malmivuo, J, Plonsey, R. Bioelectromagnetism: Principles and Applications of Bioelectric and Biomagnetic Fields, Oxford University Press. 1995</i></li> </ol>

# Module Handbook

Module designation	<i>Bioelectronics and Biophotonics</i>
Semester(s) in which the module is taught	<i>Any semesters</i>
Person responsible for the module	<i>Prof. Dr. Akhiruddin</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>In-depth (IC) course</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students are able to analyze and understand the concept of conventional biophotonics</i></li> <li><i>2. Students are able to analyze and understand biophotonic applications in various fields.</i></li> </ol>
Content	<i>Interaction of light and matter, light waves on surfaces, optical imaging, biophotonics at the nanoscale, bio-recognition in enzymes, integration of bio-electronic devices, bioelectrical devices based on biomolecular activity and biological cells.</i>
Examination forms	<i>Written exam</i>
Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (40%), mid semester exam (30%), and end semester exam (30%)</i>

Reading list	<ol style="list-style-type: none"><li data-bbox="619 188 1415 264">1. <i>Keiser, G. Biophotonics: Concept and Applications. Springer Singapore. 2016.</i></li><li data-bbox="619 264 1415 340">2. <i>Pethig, R.R, Smith, S. Introductory Bioelectronics: For Engineers and Physical Scientists. Wiley. 2012.</i></li><li data-bbox="619 340 1415 398">3. <i>Prasad, P.N. Introduction to Biophotonics, Wiley-Interscience, 2007</i></li></ol>

# Module Handbook

Module designation	<i>Bioinspiration Material</i>
Semester(s) in which the module is taught	<i>Any semesters</i>
Person responsible for the module	<i>Prof. Dr. Akhiruddin</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>In-depth (IC) course</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities per weeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students are able to explain the significance of bioinspired materials</i></li> <li><i>2. Students are able to explain the structure and function of natural materials</i></li> <li><i>3. Students are able to analyze various types of bioinspired material designs</i></li> <li><i>4. Students are able to analyze various bioinspired surface synthesis methods</i></li> <li><i>5. Students are able to analyze bioinspired materials as structural materials</i></li> <li><i>6. Students are able to analyze bioinspired materials for medical applications</i></li> <li><i>7. Students are able to analyze bioinspired materials for device applications</i></li> <li><i>8. Students are able to analyze molecular-based bioinspired materials</i></li> </ol>

Content	<i>History and development of bioinspired materials, physical properties of surfaces, Self assembly, hierarchy, and evolution, basic building blocks, biomineralization, surface design and biological materials, material synthesis: Soft lithography, imprinting, structural bioinspired materials</i>
Examination forms	<i>Written exam</i>
Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30%), mid semester exam (35%), and end semester exam (35%)</i>
Reading list	<ol style="list-style-type: none"> <li>1. <i>Chun, H.J. et al. Bioinspired Biomaterials: Advances in Tissue Engineering and Regenerative Medicine. Springer Nature Singapore. 2020.</i></li> <li>2. <i>Pandikumar, E.A, Rameshkumar, P. Bioinspired Nanomaterials Synthesis and Emerging Applications. Materials Research Foundations. 2021.</i></li> </ol>

# Module Handbook

Module designation	<i>Biophysics and Complexity</i>
Semester(s) in which the module is taught	<i>2<sup>nd</sup> (second)</i>
Person responsible for the module	<i>Prof. Dr. Husin Alatas</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>Academic Common course (ACC) in the second year (2<sup>nd</sup> semester) Master's Degree</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students can understand the importance of the complexity paradigm in reviewing physics and biology.</i></li> <li><i>2. Students can understand and master the basic principles of networks and their applications in simple problems.</i></li> <li><i>3. Students can understand and master important concepts in the formulation of statistical physics and thermodynamics, which can be used to understand the dynamics of complex systems.</i></li> <li><i>4. Students can understand and master the human body and brain as a complex system.</i></li> <li><i>5. Students can understand phenomena and master concepts related to complexity and emerging phenomena in biomolecules.</i></li> <li><i>6. Students can understand phenomena and master concepts related to complex symptoms related to the biological functions of biomolecules (macromolecules).</i></li> <li><i>7. Students can understand phenomena and master concepts related to dynamics and self-organization in living things, especially those related to health and disease.</i></li> </ol>

Content	<i>Basics of networking; important parameters in the network; Kinds of network and its classification; Micro and macro state of the system; Probability of the state of the system; Complex system entropy; The human body and brain as a complex system; The phenomenon of protein folding-unfolding and the Levinthal paradox; The principle of minimum energy and folding</i>
Examination forms	<i>Written exam</i>
Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30%), mid semester exam (35%), and end semester exam (35%)</i>
Reading list	<ol style="list-style-type: none"> <li data-bbox="619 651 1401 719">1. <i>Turner, S, Hanel, R, Klimek, P. Introduction to the Theory of Complex Systems. Oxford University Press. 2018.</i></li> <li data-bbox="619 730 1401 831">2. <i>On the Dynamics of Self-Organization in Living Organisms</i>  <a href="https://www.tandfonline.com/doi/abs/10.1080/15368370802708272?journalCode=iebm20">https://www.tandfonline.com/doi/abs/10.1080/15368370802708272?journalCode=iebm20</a></li> </ol>

## Module Handbook

Module designation	<i>Biophysics Modelling</i>
Semester(s) in which the module is taught	<i>Any semesters</i>
Person responsible for the module	<i>Dr. Agus Kartono, M.Si</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>In-depth (IC) course</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>

<p>Module objectives/intended learning outcomes</p>	<ol style="list-style-type: none"> <li>1. <i>Students are able to explain and be skilled at creating ordinary differential equation (PDB) model programs for biological network systems, such as nerve cells (neuron cells).</i></li> <li>2. <i>Students are able to explain and be skilled at creating partial differential equation model (PDP) programs to be applied to biological network systems.</i></li> <li>3. <i>Students are able to explain and be skilled at creating partial differential equation (PDP) model programs for biological network systems.</i></li> <li>4. <i>Students are able to explain and be skilled at creating partial differential equation model (PDP) programs to be applied to biological network systems.</i></li> <li>5. <i>Students are able to implement 3D protein structure prediction methods.</i></li> <li>6. <i>Students are able to use and practice Newton's laws in molecular dynamics simulations</i></li> <li>7. <i>Students are able to understand and examine molecular interactions from molecular dynamics simulation trajectories.</i></li> </ol>
<p>Content</p>	<p><i>Basic concepts of the numerical method of Ordinary Differential Equations (PDB), application of the numerical method of Ordinary Differential Equations (PDB), basic concepts of the numerical method of Partial Differential Equations (PDP) with a finite difference scheme, application of the numerical method of Partial Differential Equations (PDP) with a finite difference scheme, Protein structure: Experimental determination and prediction of 3D structure, introduction to force fields, solvent models and intermolecular interactions, basic principles of molecular dynamics simulations, application of molecular dynamics simulations to proteins and solvents, analysis of the trajectory of molecular dynamics simulation results.</i></p>
<p>Examination forms</p>	<p><i>Written exam</i></p>
<p>Study and examination requirements</p>	<p><i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30%), mid semester exam (35%), and end semester exam (35%)</i></p>
<p>Reading list</p>	<ol style="list-style-type: none"> <li>1. <i>Koch, C. Biophysics of Computation: Information Processing in Single Neurons, Series Computational Neuroscience Series. Oxford University Press. 2004.</i></li> <li>2. <i>Setubal, C and Meidani, J. Introduction to Computational Molecular Biology 1st Edition, PWS Publishing. 1997</i></li> </ol>

# Module Handbook

Module designation	<i>Biophysics Research Methodology</i>
Semester(s) in which the module is taught	<i>1st (first)</i>
Person responsible for the module	<i>Dr. Mersi Kurniati</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>Common course (CC) in the first year (1st semester) Master's Degree</i>
Teaching methods	<i>Small Group Discussion, Role-Play &amp; Simulation, Discovery Learning, Self-Directed Learning, Cooperative Learning, Collaborative Learning, Contextual Learning, Project Based Learning, and other equivalent methods</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 119 hours per semester, which consists of 150 minutes lectures per week, 180 minutes structured activities per week, 180 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>3 SCH x (1.5) = 4.5 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students are able to analyze the characteristics of research that meets scientific principles</i></li> <li><i>2. Students are able to apply scientific principles in designing research stages</i></li> <li><i>3. Students are able to apply scientific principles in analyzing and concluding research results</i></li> <li><i>4. Students have proficiency in scientific writing and presentation techniques as a means of disseminating research findings</i></li> </ol>

Content	<i>Philosophy of science and ethical principles in research and scientific publications, Characteristics of research according to scientific principles, Techniques for preparing research proposals, Techniques for data collection, analysis, and drawing conclusions, Stereotypes of scientific publications, Linguistics, numbers, symbols, terms, and scientific nomenclature, Illustration and citing literature and techniques for compiling a bibliography, English grammar in the preparation of international scientific publications, best practice in selecting journals, scientific presentation techniques</i>
Examination forms	<i>Problem based project</i>
Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (60%), mid semester exam (20%), and end semester exam (20%)</i>
Reading list	<ol style="list-style-type: none"> <li data-bbox="617 763 1396 831">1. <i>Tim IPB. Pedoman Penulisan Karya Ilmiah Tugas Akhir Mahasiswa.. Edisi ke-4. IPB Press. 2019 (in Indonesian).</i></li> <li data-bbox="617 837 1396 904">2. <i>Novikov, M.A, and Novikov, D.A. Research Methodology: From Philosophy of Science to Research Design. CRC Press. US. 2013</i></li> </ol>

# Module Handbook

Module designation	<i>Characterization Methods in Biophysics</i>
Semester(s) in which the module is taught	<i>Any semesters</i>
Person responsible for the module	<i>Dr. Siti Nikmatin</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>in-depth (IC) course</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students can describe spectroscopic characterization methods in biophysics.</i></li> <li><i>2. Students can describe and explain the characterization of diffraction in biophysics.</i></li> <li><i>3. Students can explain the working principles and analysis in biophysical characterization using a microscope.</i></li> <li><i>4. Students can explain nanomaterial testing.</i></li> <li><i>5. Students can describe and explain thermal properties in biophysical characterization.</i></li> <li><i>6. Students can describe and explain mechanical properties in biophysical characterization.</i></li> <li><i>7. Students can explain the properties of electricity and magnetism in biophysical characterization.</i></li> <li><i>8. Students can describe and explain papers in national and international journals in solving various forms of physics problems, especially the study of biophysical characterization methods.</i></li> </ol>

Content	<i>Spectroscopy, diffraction, microstructure with a microscope, nanomaterial thermal properties, mechanical properties, electrical and magnetic properties</i>
Examination forms	<i>Written exam</i>
Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30%), mid semester exam (35%), and end semester exam (35%)</i>
Reading list	<ol style="list-style-type: none"> <li>1. <i>ASM Handbook, Volume 10: Materials Characterization. 2019</i></li> <li>2. <i>Niemantsverdriet, J.W. Spectroscopy in Catalysis, Wiley-VCH, New York. 2007</i></li> <li>3. <i>Nadeau, J.L. Introduction to Experimental Biophysics, CRC Press.. 2017</i></li> <li>4. <i>Kaltashov, I.A, Eyles, S.J. Mass Spectrometry in Biophysics, John Wiley &amp; Sons, Inc. 2005</i></li> <li>5. <i>Arrondo, J.L.R. Advance Techniques in Biophysics, Springer Berlin, Heidelberg. 2010</i></li> </ol>

## Module Handbook

Module designation	<i>Contemporary Biophysics</i>
Semester(s) in which the module is taught	<i>Any semesters</i>
Person responsible for the module	<i>Prof. Dr. Husin Alatas</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>In-depth (IC) course</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students can search and study contemporary study topics in the field of Biophysics.</i></li> <li><i>2. Students can understand and explain specific Biophysics studies.</i></li> <li><i>3. Students can rewrite a specific Biophysics study in the form of a review manuscript.</i></li> </ol>
Content	<i>Please search for the latest literature via the internet; Discuss current studies related explicitly to Biophysics and reexplain them comprehensively; Present again in the form of presentations and writing review papers.</i>
Examination forms	<i>Oral Exam</i>
Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30%), mid semester exam (35%), and end semester exam (35%)</i>
Reading list	<i>Related International and national Journal</i>

## Module Handbook

Module designation	<i>Environmental Biophysics</i>
Semester(s) in which the module is taught	<i>Any semesters</i>
Person responsible for the module	<i>Dr. Ir. Irmansyah, M.Si</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>in-depth (IC) course</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students can show discipline and independence during the learning process.</i></li> <li><i>2. Students can explain physical phenomena related to mass and heat transport in the environment.</i></li> <li><i>3. Students will be able to explain the parameters of the components of the physical environment, the processes that occur and how living things (humans, animals, plants) interact with the components of the physical environment.</i></li> <li><i>4. Students are able to use models to explain the phenomena of mass and heat flow in the interaction of living things (humans, animals, plants) with the components of the physical environment</i></li> </ol>
Content	<i>General description of environmental physics including parameters of temperature, gas and water vapor, fluids, wind, heat and mass transfer, mass and heat conductance processes, heat flow in the soil, water flow in the soil, basics of radiation, radiation flux in nature, and animal and environmental interactions, human and environmental interactions, and the effect of light on plants.</i>
Examination forms	<i>Written exam</i>

Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30%), mid semester exam (35%), and end semester exam (35%)</i>
Reading list	<ol style="list-style-type: none"><li data-bbox="619 320 1398 387">1. <i>Campbell, G.S. and Norman, J.M. Introduction to Environmental Biophysics. Springer. 1998.</i></li><li data-bbox="619 398 1398 479">2. <i>Monteith, J.L. and Unsworth, M.H. Principles of Environmental Physics. 4th ed. Elsevier Ltd. 2013.</i></li></ol>

## Module Handbook

Module designation	<i>Membrane and Cell Biophysics</i>
Semester(s) in which the module is taught	<i>2<sup>nd</sup> (second)</i>
Person responsible for the module	<i>Dr. Mersi Kurniati</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>Academic core course (ACC) in the second year (2<sup>nd</sup> semester) Master's Degree</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students are able to analyze basic biophysical concepts that occur in natural and artificial membranes.</i></li> <li><i>2. Students are able to understand various phenomena and the application of biophysical theories that occur in membranes.</i></li> <li><i>3. Students are able to develop knowledge of membrane biophysics based on current research studies.</i></li> </ol>
Content	<i>Development of membrane technology, cell structure and function, models, properties and function of cell membranes, membrane transport, membrane machines, membrane bioelectricity, artificial membranes, membrane filtration processes, membrane synthesis, membrane characterization, membrane applications</i>
Examination forms	<i>Written exam</i>
Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30%), mid semester exam (35%), and end semester exam (35%)</i>
Reading list	<i>Baker, R.W, Membrane Technology and application. 2nd Edition. John Wiley &amp; Sons Ltd, The Atrium, Southern Gate, Chichester, West Sussex PO19 8SQ, England, 2004</i>

# Module Handbook

Module designation	<i>Orbital and Molecular Quantum Theory</i>
Semester(s) in which the module is taught	<i>1st (first)</i>
Person responsible for the module	<i>Dr. rer.nat Hendradi Hardhienata</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>Academic Common course (ACC) in the first year (1st semester) Master's Degree</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students are able to understand quantum postulates and problems in wave function interpretation.</i></li> <li><i>2. Students are able to analyze and solve quantum problems involving 1 D potential.</i></li> <li><i>3. Students are able to apply quantum mechanical concepts to the interaction of light and matter and its applications in biophysics such as material characterization using spectroscopy or bioimaging.</i></li> <li><i>4. Students are able to master basic knowledge and theory about orbital and molecular theory, especially the formation of hybridization levels.</i></li> </ol>
Content	<i>History of quantum physics, quantum postulates related to state functions, operators in quantum physics, quantum dynamics equations, hydrogen atomic theory, quantum harmonic oscillator, molecular orbital theory, interaction of metal molecules, quantum dot.</i>
Examination forms	<i>written exam</i>
Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30), mid semester exam (35%), and end semester exam (35%)</i>

Reading list	<ol style="list-style-type: none"><li data-bbox="616 192 1398 264">1. <i>Blinder, S. M. Introduction to Quantum Mechanics: in Chemistry, Materials Science, and Biology. ## Module Handbook

Module designation	<i>Protein Physics</i>
Semester(s) in which the module is taught	<i>Any semesters</i>
Person responsible for the module	<i>Dr. Setyanto tri Wahyudi, M.Si</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>In-depth (IC) course</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students are able to expand their knowledge and the basic theory about structure, function, folding protein and its interactions.</i></li> <li><i>2. Students are able to master the technique and physics concept in various protein applications.</i></li> <li><i>3. Students are able to applied the method and visualization technique of protein structure</i></li> <li><i>4. Students are able to identify proteins to proteins and proteins to ligand interaction.</i></li> <li><i>5. Students are able to construct and modify 3d protein structure.</i></li> </ol>
Content	<i>Synthesis and the function of protein, protein structure Hierarchy, protein structure characterization, determination of 3d protein structure, Binding energy, force between molecule and proteins stability, thermodynamic and kinematics protein folding, Applications of protein as a functional material and sensors, Schering function concepts in proteins - protein interaction and protein-ligand interactions. protein structure visualization. prediction of protein 3D structures. Geometry optimization concept on substrate/ligand protein, protein-protein docking practicum, protein-ligand docking practicum.</i>
Examination forms	<i>Written exam</i>

Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30%), mid semester exam (35%), and end semester exam (35%)</i>
Reading list	<ol style="list-style-type: none"><li data-bbox="619 331 1401 387">1. <i>Finkelstein, A and Ptitsyn, O. Protein Physics. 2nd Ed. Academic Press. 2016.</i></li><li data-bbox="619 405 1401 461">2. <i>Bergethon PR, The Physical Basis of Biochemistry: The Foundations of Molecular Biophysics, 2010.</i></li><li data-bbox="619 479 1401 535">3. <i>Allewell N, Narhi LO, Rayment I, Molecular Biophysics for the Life Sciences, Springer, 2013</i></li></ol>

## Module Handbook

Module designation	<i>Radiation Biophysics</i>
Semester(s) in which the module is taught	<i>Any semesters</i>
Person responsible for the module	<i>Dr. Mersi Kurniati</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>in-depth (IC) course</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students are able to explain the mechanism of interaction of ionizing radiation in living things.</i></li> <li><i>2. Students are able to describe the process of radiation, the process of decay of atomic nuclei, the interaction of radiation with matter</i></li> <li><i>3. Students are able to explain basic methods and instruments for radiation monitoring, detection and measurement</i></li> </ol>
Content	<i>Basic concepts of radiation biophysics, basic principles and radiation protection, radiation absorption in biology, cell survival curves, radiosensitivity and cell age in the mitotic cycle, radiation energy deposition, radiation as cancer therapy, basic methods and instruments for radiation monitoring, detection and measurement of radiation biophysics applications</i>
Examination forms	<i>Written exam</i>
Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30%), mid semester exam (35%), and end semester exam (35%)</i>

Reading list

1. *Hall, E.J. Radiobiology for the Radiobiologist. Lippincot Williams and Wilkins, Philadelphia. 2018.*
2. *Stabin, M.G, Radiation Protection and Dosimetry: An Introduction to Health Physics, Springer, 2008.*
3. *Alpen, E.L. Radiation Biophysics, Academic Press, California. 1998.*

## Module Handbook

Module designation	<i>Surface Physics</i>
Semester(s) in which the module is taught	<i>Any semesters</i>
Person responsible for the module	<i>Dr. Faozan</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>In-depth (IC) course</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students are able to model surface structures.</i></li> <li><i>2. Students are able to analyze surface properties based on electrical and optical properties.</i></li> <li><i>3. Students are able to analyze surface interactions with adsorbate.</i></li> <li><i>4. Students are able to explain surface interactions in catalytic and photocatalytic processes.</i></li> <li><i>5. Students are able to explain surface interactions in sensor and solar cell applications.</i></li> </ol>
Content	<i>Basics of 2-dimensional crystallography, modeling, structure and energetics, electronic structure, structural defects, adsorption, catalytic reactions, reaction kinetics, surface optical properties, surface plasmon resonance, surface interactions in solar cells, surface synthesis methods.</i>
Examination forms	<i>Written exam and oral presentation exam</i>
Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30%), mid semester exam (35%), and end semester exam (35%)</i>

Reading list

1. *Oura, K, Lifshits, V.G., Saranin, A, Zotov, A.V, Katayama, M. Surface Science. Springer Berlin Heidelberg. 2003.*
2. *Grob, A. Theoretical Surface Science, Springer-Verlag Berlin Heidelberg. 2003.*
3. *The Surface Science Society of Japan. Compendium of Surface and Interface Analysis. Springer Nature, Singapore. 2018.*

## Module Handbook

Module designation	<i>Sustainable Energy Physics</i>
Semester(s) in which the module is taught	<i>Any semesters</i>
Person responsible for the module	<i>Prof. Dr. R. Tony Ibnu Sumaryada WP</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>In-depth (IC) course</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li>1. <i>Students are aware of the energy crisis, the need for sustainability and consideration of limited natural resources.</i></li> <li>2. <i>Students are aware of global energy security and policy affecting Indonesia.</i></li> <li>3. <i>Students are able to master the basic concept and utilization of various renewable energy resources</i></li> <li>4. <i>Students are able to analyze various alternative renewable energy resources</i></li> </ol>

Content	<ol style="list-style-type: none"> <li>1. <i>Awareness of Sustainability in various ways, Environmental and energy crisis as well as non-renewable energy sources. Energy policy</i></li> <li>2. <i>Basic concept and example of utilization of solar energy, photovoltaic solar cells, thermovoltaic, solar thermal, solar chimney.</i></li> <li>3. <i>Basic concept and example of utilization of wind energy, various wind turbine designs, utilization of ocean wave energy in various designs.</i></li> <li>4. <i>Indonesia's Geothermal Potential and its utilization technology.</i></li> <li>5. <i>Basic concept and example of utilization of nuclear energy, radiation protection, advantages and disadvantages of nuclear power plants.</i></li> <li>6. <i>Basic concept and example of utilization of Biomass Energy, Biomass derivative products.</i></li> <li>7. <i>Basic concept and example of conversion of carbohydrate-rich biomass, Conversion of lignocellulosic rich biomass, Oil-rich biomass conversion</i></li> <li>8. <i>Basic concept and example of conversion of biomass into natural fiber, Utilization of energy through biorefinery microalgae</i></li> </ol>
Examination forms	<i>Written exam and/or Case Based Learning/Project</i>
Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (20%), mid semester exam (40%), and end semester exam (40%)</i>
Reading list	<ol style="list-style-type: none"> <li>1. <i>Tester, J.W, Drake, E.M, Driscoll, M.J, Golay M.W, and Peters, W.A. Sustainable energy, MIT Press. 2012.</i></li> <li>2. <i>Peake, S, Renewable Energy: Power for a Sustainable Future, 4<sup>th</sup> Edition, Oxford Univ Press, 2018</i></li> <li>3. <i>Evans, R.L. Fueling Our Future: An Introduction to Sustainable Energy, Cambridge University Press. 2007.</i></li> </ol>

## Module Handbook

Module designation	<i>Thermal Biophysics</i>
Semester(s) in which the module is taught	<i>1st (first)</i>
Person responsible for the module	<i>Prof. Dr. Ir. Irzaman, M.Si</i>
Language	<i>Bahasa Indonesia</i>
Relation to curriculum	<i>Academic Common course (ACC) in the first year (1st semester) Master's Degree</i>
Teaching methods	<i>100 minutes lectures and 120 minutes structured activities perweeks</i>
Workload (incl. contact hours, self-study hours)	<i>Total workload is 79 hours per semester, which consists of 100 minutes lectures per week for 14 weeks, 120 minutes structured activities per week, 120 minutes individual study per week, in total is 14 weeks per semester, excluding mid exam and final exam.</i>
Credit points	<i>2 SCH x (1.5) = 3 ECTS</i>
Required and recommended prerequisites for joining the module	<i>No prerequisites required</i>
Module objectives/intended learning outcomes	<ol style="list-style-type: none"> <li><i>1. Students are able to develop basic knowledge and theory regarding energy transformation in biological systems.</i></li> <li><i>2. Students are able to develop basic knowledge and theory about the 1st and 2nd laws of thermodynamics in biological systems.</i></li> <li><i>3. Students are able to identify applications of Gibbs free energy in biological cases.</i></li> <li><i>4. Students are able to analyze static thermodynamics in biology cases.</i></li> <li><i>5. Students are able to identify binding equilibria and reaction kinetics in biological cases.</i></li> <li><i>6. Students are able to identify the application of current knowledge of biological thermodynamics in differential scanning calorimetry (DSC) tools and the application of information theory knowledge to biological cases.</i></li> </ol>
Content	<i>Energy transformations, first law of thermodynamics, second law of thermodynamics, Gibbs free energy theory, applications of Gibbs free energy, statistical thermodynamics, binding equilibrium, reaction kinetics, current knowledge of biological thermodynamics (Information Theory)</i>

Examination forms	<i>Written exam</i>
Study and examination requirements	<i>Minimum attendance at lectures is 80% (according to IPB regulation). Final score is evaluated based on assignment and presence (30%), mid semester exam (35%), and end semester exam (35%)</i>
Reading list	<ol style="list-style-type: none"> <li>1. Haynie, D.T. <i>Biological Thermodynamics</i>. 2nd Ed. Cambridge University Press. 2016.</li> <li>2.
